

liteCUE-web

Cost-effective control system with web application license

Product code: **CS0608**

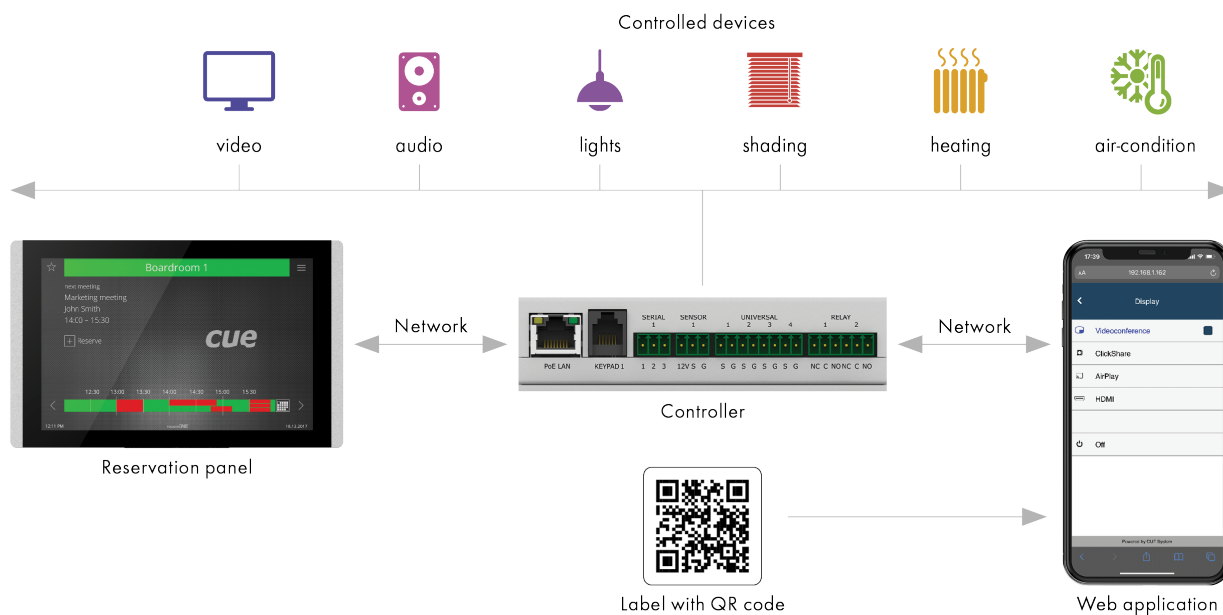

Main features

- Complete easy-to-use solution for room control
- Small room controller with various control ports
- One-time license for web control & reservation application
- Web application activated by scanning a QR code
- All handled from the comfort of own personal device
- All control in user's hands
- The Web application provides a customized user interface
- Compatible with all mobile platforms
- One-time license purchase

Description

The basic configuration for deploying a liteCUE-web assumes the use of a controlCUE-basic controller, in which a control application prepared using the Cue Visual Composer programming tool is loaded. The control unit controls the individual devices installed in the meeting room using the webCUE application. The controller must be accessible from a mobile device via a data network.

The QR code for activating the webCUE application can be printed on a label and pasted, for example, to the entrance to the meeting room, table, etc. The reservation panel (not part of this set) enables activation of meeting management functions in the web application. The reservation panel and controller must be connected to the same network.

Installation and setup
