It's great to have solutions...

FACT SHEET

Mobile video wall display

The mobile video wall displays are the flexible solution in comparison with a wall mounted or ceiling suspended video wall. The displays are made on request and offer lots of possibilities. As standard, Audipack supplies 3x3 and 4x4 configurations for screens of 46", 47", 55" and more. A rigid base frame with lockable wheels, furnished front and high finishing grade.

The electric height adjustment enables you to lower the video wall when moving the display to another location, or raise the video wall higher for a better view by the audience.

Install the Audipack Line Array speakers on both sides of the video wall for not only a perfect audio support for your presentation, but also for a neat side view finishing of the video wall. The Line Array speakers are customized to match the height of the screen.
