FACT SHEET

VWM basic video wall mounting system

The best mounting system for videowalls....period

The "VWM basic" is the most easy to use mounting system for installing video walls to walls, ceilings and even for suspended applications.

The VWM basic system takes care of uneven wall surfaces, unintentional curves or defects in the wall.

The "single row wall mount feature" prevents unnecessary drilling in the wall and the vertical mounting arms provide perfect vertical screen alignment in an instant.

All screens are fully adjustable in horizontal, height and wall-offset position.

Even a corner-to-corner adjustment feature is built-in as standard. All these features in a wall offset of only 35 mm!
